17: Norbeck--3 [2] (no date) 1950 Formosan Aborigines
116, 101, 131 Atayal

"The Seiban are usually classified into nine tribal groups, with a large number of subtribes, often with little or no political unity. One of the largest units is the Atayal, composed of a considerable number of more or less independent and sometimes feuding subgroups which inhabit the extremely mountainous area of the north interior, an area comprising approximately one-sixth of the total island."

Formosa is an island which extends along the Chinese continent from lat. 22° to 25° 20" N. When you measure it on the map, its greatest length equals 4 degrees from north to south. The book by the American writer William gives its surface as 14, 000 English squares (36, 000 kilometers). It is volcanic in nature, and its distinguishing feature is the chains of parallel mountains, which traverse it from north to south.

20: Alvarez--251 [3] (no date) 1927 Formosan Aborigines
116, 144, 131, 173 Paiwan

"The Paiwan seem to be of Malayan extraction. At present they live in the southernmost part of the island. It is said that four centuries ago they were lords of a flourishing kingdom, then comprising the whole south and a part of the centre, where they afterwards were met with by the Dutch and subsequently reduced to submission by the invaders.

As to their antiquity and origin, there is nothing left but some oral traditions and the notices, most of them obscure and extremely vague, given by several ancient Chinese historians. It is needless to say, that such material can cast but a slight light upon the past history of these tribes."

20: Alvarez--251 (no date) 1927 Formosan Aborigines
116, 131 Tayal

"The Atayal, an amalgam of Chinese and Pre-Chinese elements, occupied in the XVIth century the whole northern part, that is to say, not only the mountains they inhabit today but also the plains where now is situated the capital Taihoku. Under the name of Southern Atayal, they still live in the plains of Polisia."

20: Alvarez--254 [3] (no date) 1927 Formosan Aborigines
116, 101, 131

"The territory occupied by the seven tribes, or branches mentioned above [MC: see preceding paragraphs in categories 116 or 101] embraces nearly seven thousand two hundred square miles, viz., the half of the total area of the island."

20: Alvarez--254-255 (no date) 1927 Formosan Aborigines
116, 131, 101 Tayal

"The Atayal have a much greater extent of territory (about 3000 square miles) than any other distinct branch of the Formosan [255] aborigines. They are most ferocious and dreadful head-hunters. They use also the art of tattooing in great scale. The Ocean constitutes the eastern border of their home. In the north, they are neighbours of the Chinese. The capital Taihaku, or Taipeh is about four leagues distant from the first villages of the Atayal. Their western neighbours are likewise Chinese. In the south they live adjacent to the Bunum. And in the south east, they are neighbours of the northern Amis."

116, 131, 554, 721 Atayal

Beyond Taikokan, to the east, the mountains ascend steeply. During the bloody battles in 1907, the foothills were wrested from the Malayans. The tribe which lives here, the Atayal, belongs to the Seiban group (the "red savages"); this is a tribe of headhunters which is feared greatly. The practice of headhunting is or was characteristic of most of the Malayan tribes. [607] The natives decapitate their enemies, among whom they include neighboring tribes as well as Chinese, Japanese, and Europeans. The headhunters are not, however, a courageous people. They lie in ambush and take the enemy by surprise, usually while he is at work; then they cut off his head which they preserve as a trophy at home. If a native has taken the head of an enemy, this is his badge of courage. This cruel custom is so deeply rooted in the beliefs and traditions of the Malayans that all attempts to combat it so far have proved unsuccessful.

116, 131, 437, 712

The border between the cultivated land and that belonging to the aborigines is protected by a method protected by a method which had been perfected by the Chinese settlers and which the Japanese have taken over and modernized. The pioneers had set up a wall, like a small wall of China, along the extreme boundary of the conquered territory; guards were stationed at regular intervals to resist all attempts of the aborigines to break through the wall. The Chinese had trained some troops especially for this purpose. The Japanese restored these Ayu Lines; they stationed guards at intervals of 300 meters and set up fortresses at longer intervals. Thus the boundary is protected by an organized military police who must live in this dangerous region with their families throughout the entire year. There is a permanent state of war. The soldiers shoot all Malayans at sight, while the Japanese and Chinese in this region are never safe. I walked along this line for several kilometers. The Japanese have taken [608] advantage of all the natural fortifications; the wall is set up along the crest of the hills. In the section I visited the line had been moved further up the mountains recently to include the newly conquered territory. The innovation consists in the barbed wire which is strung along the entire line, 170 kilometers long in all; this serves to conduct an electric current with high voltage. To touch the wire would therefore be fatal. The guards make use of the electric current only in times of great danger, especially at night. By thus isolating the aborigines entirely, and preventing the greedy Chinese from smuggling, an occupation in which they are always engaged in spite of the hazards which attend it, the Japanese

hope eventually to wear down the resistance of the Seiban. It is through the smugglers that the aborigines obtain their powder and ammunition as well as salt; without these they cannot wage the battle for their existence for very long. They are still able to obtain these necessities, however, and it is characteristic of the greed of the Chinese that more of them are killed by the electric wire than by the aborigines themselves; I learned this fact from the district officer in Banshoryo, the main locality of that district. So far, eleven Chinese and only two natives had been killed by the electric wire. For barter between the aborigines and the Chinese, the antlers of deer killed by the latter are an important article of exchange. The Chinese pulverize these and use them for medicinal purposes; they pay a high price for them. The natives avoid the dangerous electrical wire by passing through the raging torrents in the valleys; the Japanese call the river which cuts through the boundary at the point where we passed it Kubitorigawa, that is, the river of headhunting.

34: Del Re--11-12 U-4 (no date) No Date Formosans-Aborigines 1-2
116, 101, 131, 103 Yami

"The small coral island of Kô-tô-sho (island of the red heads), exclusively inhabited by Yami, has an area of about 45 square miles and lies between Formosa and the Philippines at a distance of 45 miles and lies between Formosa and the Philippines at a distance of 45 miles from the S.E. coast of Formosa. According to the census of 1934 it had a population of 1682 including a few Japanese policemen and their families. The name of Yami appears to have been due to Dr. R. Torii who, on visiting the island in 1897, reported that, when asked the name of their tribe, the savages replied; 'Yami Kami' (Yami we), kami being the personal pronoun used exclusively to denote the first person plural. Later investigations have shown, however, that the Yami have merely accepted the name given them by the Japanese. It should be added that the Western name for the island (Botal-Tobago) first appeared in Robert Broughton's map of the N. E. coast of Asia and the Japanese Islands (Weimar, 1805). Sanson d'Abbeville's map of the Philippines (1654), gives Tabaco Xima, the latter word being obviously the transcription of shima, (island), which also appears on an old Japanese chart of (?) 1607-08. In Chinese maps of the Sung Dynasty it is called Tabako or Tambako but later, in the Ching Dynasty, it appears as An-tau-su, pronounced by the Japanese Kô-tô-sho. XVIIIth [12] century maps give its name as Botrol (1720) and Bottol (1792), the latter names being derived from Botol and Buturu, by which it is known to the Puyuma and the Ami tribes of the East coast of Formosa, geographically nearest to it. From the evidence

available Dr. Asai concludes that 'Tobago' comes from the Chinese via Japan, and 'Botal' direct from the aborigenes, and that the two names were subsequently combined by Western cartographers, possibly to avoid confusion with the other island called Tobago in the British West Indies."

"The Lek-whan, a large division of the Pepo-whan, living near the center of the island, seem to have originally come from near Chang-wha. A few miles to the north of this city there are still toward two thousand living in the towns of Loisia and Toasia, though, like the Pepo-whan near Taiwanfu, badly in debt to the Chinese. There is a large settlement of them in a mountain valley, two days' journey to the east of Changwha, called Posia or Polisia, to which, according to their own account, they began migrating forty or fifty years ago, and they are still going, there now being some four or five thousand there. This valley is entirely surrounded by mountains and forests inhabited by savages. They are nominally at peace with these, and pay them a yearly tribute of rice and cattle, but in spite of this they are continually losing their lives from attacks by the savages, some twelve or fourteen persons from the valley being killed annually, while at work in their fields or fishing or hunting. The only news of the manner or cause of the loss the friends and relatives receive, being often the headless trunk lying where it fell."

116, 101, 131, 142, 621, 291 Chin-hoan

"The savages that I visited east of the Lek-whan settlement of Posia, I have left with the general designation of Che-whan. The Chinese and Pepo-whans often call them Bon-whan. They occupy a part of the water shed of the island about the head-waters of the river that flows through the valley of Posia and into the Formosan channel near Changwha, and of other streams that flow into the Pacific. They are said to belong to a nation or confederacy, of over thirty villages, under one chief. They are very small and inferior looking, hardly averaging five feet in height, but very muscular from their life spent in climbing up and down their steep mountains. Their dress is made of a species of nettle, perhaps the ramil plant, which they cultivate, and which the women weave into narrow strips of very strong and durable, but somewhat coarse cloth, which is generally ornamented with red and blue stripes woven in. The only clothing of the men is a coarse sleeveless shirt of this cloth, which comes down to the middle of the thigh. I saw a couple of men among them wearing nothing but narrow (tapa rabos), not so wide as the hand, made apparently from the hair of some animal, woven, and colored red. They were said to belong to another, but friendly tribe. The women wear a sort of short tunic or kilt."

37: Steere--310 [1] S-3 (1873-74?) 1875 Formosan Aborigines
116, 131, 621, 142 Chin-hoan

"The Tsui-whan--Chinese Tsui, water, and whan, savage--are so called from living about a small lake, which is situated about ten or fifteen miles to the south of Posia, from which they get a great part of their living by fishing. This lake, with the flat, cultivable lands about it, is entirely shut in by wooded mountains, those to the east rising to great height. The lake is over two miles in length, and contains a number of species of fish and eels. There are three villages of Tsui-whan about the lake, containing perhaps in all a thousand people, under one chief, and apparently entirely separate and independent of any other tribes of savages. They are a small but well-formed race, with regular and rather pleasing features."

37: Steere--311 [2] S-3 (1873-74?) 1875 Formosan Aborigines
116, 131, 162, 621 Chin-hoan

"The Kale-whan are a tribe of Che-whan inhabiting the mountains east of Takou. The territory they occupy is not extensive, not reaching over the dividing line of mountains, but all lying toward the west. They live in two villages, which are called by the Chinese Toasia and Taosia--large and small towns. The first and lowest contains perhaps two hundred inhabitants, while Taosia is properly a collection of villages, with toward a thousand inhabitants. They can look down from these villages, which must be at a height of four or five thousand feet, upon the great plain below, thickly dotted with Chinese villages and covered with rice fields, and they can even see the sea in the distance."

Paiwan

INVESTIGATION OF SOCIAL ORGANIZATION OF THE CHALA'ABUS PAIWAN, PINGTUNG HSIEN

WEI HWEI-LIN
Translated by CHEN CHI-LU

This is a preliminary report of the field-works among the Chala'abus Paiwan of Pingtung Hsien. Members who participated were Messrs. Ho Ting-jui, Tang Mei-chun, Huang Hsün-ch'eng and the present writer.

Chala'abus village was chosen because: it is one of the important and old tribes of the Central Paiwan, and, is the center of the Chimo racial group of the Paiwan. We have noted after the field-session that the village had other significances: (1) The village consisted of twelve aristocratic households whether of the Chimo or of the Paiwan groups. The village organization was thus rather complicated in structure. (2) The dwelling houses and their arrangement had been well preserved in their original form. (3) Old traits in material culture, such as stone-engraving, wood-carving, designed weaving, and embroidery, had been also well kept. (4) The ethnic character is rather conservative. They have been comparatively less influenced by the Japanese and the Chinese as compared to the other groups of the tribe.

Because of the limitation of time and investigators, we emphasized tribal organization and chieftanship of the village. Our field-work was undertaken from Feb. 1 to 15. Because of the complexity of the culture, the investigation is by no means a complete one.

SETTLEMENT TYPE AND DUAL ORGANIZATION

Chala'abus village is situated on the south-eastern slope of Mt. Nan-ta-wu and stands on the northern bank of the Lai-i River or the Upper Lin-pien River. The population of Chala'abus village was 158 households and 948 persons at the time of our investigation. With the Exception of 12 households who had moved to Chiqasan which lies between the village site and the plain below it and formed a separate hamlet by themselves, all the other 146 households were concentrated on the two adjacent fan-shaped slopes which in the present report are referred to as the village site. The village of Chala'abus hence consisted of two parts: the south and the north-parts. Each of them occupied a fan-shaped slope. The south-part was called Chinimoan or "the living land of the Chimo", and the north-part Pinaiwanan or "the living land of the Paiwan". The village site was on a slope of 30 degree to 45 degree inclination, with the width north to south 80 M., and length east to west 100 M. Dwelling houses, including floors and roofs, were built of slate. All these houses had small front yards paved with slate. A continuous row of houses of the same level had their yards adjacent on the same level; but communication between two rows of houses was by means of narrow stair-ways, because the front yards of houses in the rear row were always on a level with the roofs of the front houses. The village is thus in a terrace form. Chinimoan consisted of eight terraces, and Pinaiwanan ten. Each terrace had a row

51:Chen and Coe E-5 (1953)1954 AD1 Formosa
Formosan Aborigines AD4

different localities, so that their cultures, though similar, are not uniform. The native tribes also differ considerably in the degree to which they have been acculturated and in the type of culture change that has taken place.

The Ami

The Ami live in the Taitung Rift Valley, which runs in approximately a north-south direction for 150 kilometres along the east coast of Formosa. Some Ami live on the east coast proper. The Ami tribe is the largest on Formosa. They are divided into five groups by dialect and cultural differences. The number of households and population of each group, based on the census of 1937, are as follows:

Group	No. of households	Population
Pei-nan	859	9546
Heng-ch'un	461	4403
Hai-an	1159	11760
Hsiu-ku-luan	2008	15861
Nan-shih	1713	8436
Total	6200	50006

The chief traits of the Ami are intensive agriculture and fishing; pile dwellings; paddle-and-anvil pottery; long wooden shields; feather headdresses; clans[1]; matrilineal descent and matrilocal residence; classificatory or Malayan kinship terminology; parent-child nymic linkage; and age-grades.

Tavarong is a town of 5,000 population situated in the central part of the Taitung Rift Valley, in Hualien Hsien. It belongs to the Hsiu-ku-luan group and is regarded by the Ami themselves as the oldest settlement in the whole Ami area. About one per cent of the Tavarong townsmen are Christians; the rest hold to their native religion.

Gods, spirits, and souls

The Ami term for gods, which include also spirits and souls, is *kawas*. The Tavarong Ami believe in two kinds of *kawas*. The first kind, which may be considered natural gods, include *maratau*, *tšidar*, *borar*], and others. *maratau* is a male tutolary deity who resides in heaven. According to informant Maran-Namo?, *maratau* is the god of "politics and strength". In former days, when the Ami were at war with their neighbors, the Atayal, they prayed to *maratau* for protection[2]. *tšidar* is the female sun goddess, and *borar*] the male moon god. The sun goddess is held to be more powerful than the moon god. Maran-Namo? while explaining the designs on the houseposts of the house of the *kakita:n* (priest), stated that *tšidar* is the almighty deity and holds the supreme position over

1. Utsurikawa [1935] reported about 55 clan names for the Ami, but he gave no clan names north of the Vataan, Tavarong, and Karuran areas.
2. According to Furuno [1954:3-42], *maratau* is connected with headhunting and is the god of crops and game, as well as being the war god.
